- Authorization for this examiner's amendment was given in a telephone interview with Mr. George R. Pettit on 28 June 2004.

REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and an apparatus for data compression which segments a data string including at least one unit of data into blocks forming vectors, searches a code book prepared in advance for a code vector similar to a vector extracted from a compression target, and outputs a code corresponding to the code vector. Each independent claim identifies the uniquely distinct feature “ for wherein the block forming the vector of the compression target is extracted from the compression target while shifting a spatial position in a horizontal direction at least between blocks close to each other in a vertical direction”. The closest prior art, Tsuchiya et al. (US 6,202,048 B1) disclose wherein a synthesis unit decoder selects the code vector corresponding to the index in the synthesis unit from the speech source signal codebook, and shifts the code vector according to the shift number in the synthesis unit; while Normile et al. (US 5,649,030) disclose for an improved method and apparatus for vector quantization to build a codebook for the compression of data, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.
